Core Syllabus

CAP 5510;
CGS 5166

Giri
Narasimhan

Course
Preliminaries

Introduction

Goals &
Perspectives

Phenomenal
Growth

Short
Homework

Model
Organisms

Motivating
Bioinformatics

- Fundamentals of Biology, Statistics, & Bioinformatics
- Databases; Data Integration; BioPerl & BioPython;
- Sequence Alignment, Multiple Sequence Alignment
- Sequencing; Next Generation Sequencing & Applications
- Discovery, Learning, Prediction & Inference
- Machine Learning: NN, HMM, SOM, SVM, etc.
- Gene Regulation; Regulatory Elements; & networks
- Transcriptomics: Analysis of Gene Expression Data
- Gene Ontology and Pathways; Protein-protein interactions
- Genomics, Proteomics, Comparative Genomics
- Phylogenetic Analysis
- Molecular Structural Analysis: RNA and Proteins
- Genetics and Genome-Wide Association Schemes
- Single Nucleotide Polymorphisms
- Misc.: Omics; Alt. Splicing; Epigenetics; Visualization;

Short Homework

- What is the C-value of an organism? What is its relationship to the genome size? Read about the *C-value enigma* in:
 - Gregory, TR (2004). "Macroevolution, hierarchy theory, and the C-value enigma". *Paleobiology* **30**:179-202. or
 - Gregory TR (2001). "Coincidence, coevolution, or causation? DNA content, cell size, and the C-value enigma". *Biological Reviews* **76**(1): 65101
- Name at least one organisms whose genome is considerably larger than that of humans. How big is that genome?
- What is the *Ferrari of the virus world* and why is it called so?
- What is the *1000 Genomes* project? Look at: <http://www.nature.com/nature/focus/1000genomes/>
- What is *antibiotic resistance* and why is it a public health crisis? What is the name of a new antibiotic reported in *Nature* in 2015 that kills pathogens without detectable

Bioinformatics

- Entire genome 1998; 8 year effort
- 1st animal; 2nd eukaryote (after yeast)
- Nematode (phylum)
- Easy to experiment with; Easily observable
- 97 million bases; 20,000 genes;
- 12,000 with known function; 6 Chromosomes;
- GC content 36%
- 959 cells; 302-cell nervous system
- 36% of proteins common with human
- 15 Kb mitochondrial genome
- Results in **ACeDB**
- 25% of genes in operons
- Important for HGP: technology, software, scale/efficiency
- 182 genes with alternative splice variants

Model
Organisms

Motivating
Bioinformatics

- Sequenced 2001; 15 year effort
- 3 billion bases, 500 gaps
- Variable density of Genes, SNPs, CpG islands
- 1.1% of genome codes for proteins;
- 40-48% of the genome consists of repeat sequences
- 10 % of the genome consists of repeats called ALUs
- 5 % of the genome consists of long repeats (≥ 1 Kb)
- 223 genes common with bacteria that are missing from worm, fly or yeast.
