SPRING 2019: CAP 5768 – Intro to Data Science
[WEBSITE PREPARATION]

Submit a webpage on canvas briefly describing your project by 11:59 PM on Friday, November 29, 2019.

- The main purpose of the website is to give an overview of the project, the data and the results.

- Add a title and the names of the team members in alphabetical order.

- Describe your project in a few sentences. First, describe the motivation for the project. Next describe what you intended to discover, possibly as a list of aims.

- Next describe the data sets used in 2-3 sentences. Describe the source, contents and size. You may or may not provide links to the data source.

- Next describe the methods used for the data analysis.

- Finally, summarize the results. This could be done using one or two small figures and/or one or two conclusions.

- An alternative way to organize your webpage is to take one section of the project at a time by describing the aim, data, methods, and results in a couple of sentences.

I suggest to keep each webpage to be one screenfull. Submit on canvas a zip file (called ProjectName.zip) with the index.html (main file) and other image files. I should be able to unzip and install and link to it with the ProjectName. Make sure all the file permissions are correctly set up for the installation.
