Message from the Conference and Program Chairs

ICDM 2010

Welcome to the 10th IEEE International Conference on Data Mining which will be held in Sydney, Australia from 14 to 17 December 2010. While this is the tenth instalment of the iconic ICDM conference series, it is the first one held in the southern hemisphere and consequently, it is the first to be held in the summer, even though it is in December. You will know Sydney by its iconic landmarks, the Sydney Opera House, the Sydney Harbour Bridge, and the 2000 Summer Olympic Games. December in Sydney is also the time to enjoy a warm and sunny Christmas.

ICDM 2010 continues the series' tradition of stimulating technical, workshop, and contest paper presentations, as well as tutorial presentations and demonstrations. To celebrate the 10th anniversary of ICDM, this year's conference also includes events that look at the state of Data Mining research from different perspectives – specifically, a panel which focuses on Top-10 Data Mining Case Studies, a keynote that focuses on the past 10 years, a forum devoted to Early Career Researchers, and a forum which will explore interactions between academic researchers, industry practitioners, and government end-users in data mining. We hope these specialised academic activities will create a platform for data mining researchers to share their problems, ideas, and solutions in data mining research and its applications.

As well as academic activities, the conference will also offer delegates various social activities. Morning and afternoon teas and lunch will be provided daily, as well as a reception, a boat cruise with banquet and live show, and the choice of either a City, or an Opera House tour. In addition, the conference offers every delegate an individual Internet account with unlimited bandwidth so that all participants will be able to maintain connections with their network as if they were in their own office.

The success of any big conference depends on the hard work of a dedicated team. ICDM 2010 is no exception, and the team members deserve acknowledgment. First, we would like to thank the Honorary Chair, **Ramamohanarao Kotagiri**, for bringing this conference to Sydney. Our thanks and gratitude are also due to the Program Committee Vice Chairs and members, who undertook the enormous task of advising Geoff and Bing in choosing the 155 best papers from nearly 800 submissions. We would like to thank the Workshop Co-Chairs, **Wynne Hsu** and **Wei Fan**, the Tutorial Co-Chairs, **Sanjay Chawla** and **Myra Spiliopoulou**, the Contest Chair, **Demetris Zeinalipour**, the Exhibits and Demos Co-Chairs, **Bart Goethals** and **Yucel Saygin**, the Panels Chair, **Hillol Kargupta**, and the Award Chair, **Wei Wang**, for their hard work and contribution in creating an excellent program for the delegates.

We would also like to acknowledge the behind-the-scenes contributions, including the Publicity Co-Chairs **Jian Yang**, **Taghi Khoshgoftaar**, and **Wenjie Zhang**, who assisted ICDM 2010 to attract a record of nearly 800 submissions; Sponsorship Co-Chairs **Gabor Melli** and **Paul Beinat** who attracted substantial conference sponsors; the webmaster, **Xinhua Zhu** for timely updates of the webpage, the secretary **Li Liu** who efficiently handled registrations; and Student Travel Award Chair **Wei Ding** who selected those students most deserving of travel awards.

We would like to especially acknowledge the Local Arrangements Chair, **Longbing Cao**, and Finance Chair, **Xingquan Zhu**, who have managed all logistical arrangements including venue booking, hotels, lunches, banquets, tours, student volunteer coordination, etc. They have spent considerable time ensuring the conference will run smoothly. We would like to thank the ICDM Steering Committee for their guidance and help. Special thanks also go to the ICDM Steering Committee Chair, **Xindong Wu**, who has generously offered help, guidance and solutions at all levels to this conference series since it was initiated in 2001.

Special acknowledgement also goes to the financial sponsors, without whose support we could not have organised this conference. They are: the US **National Science Foundation (NSF)**, **TomTom International**, **IEEE Computer Society**, **QCIS Centre (UTS)**, **Advanced Analytics Institute (UTS)**, **Rulequest Research (Data Mining Tools)**, **UNSW School of Computer Science and Engineering**, **Asian Office of Aerospace Research & Development (US Air Force Office of Scientific Research)**, **University of Sydney**, **ARC Research Network in Enterprise Information Infrastructure**, **NASA**, **IBM Research**, **Capital Markets CRC**, **KNIME (Data Analytics Made Easy)**, **CSIRO**, **SAS**, and the **Honorary Patronage of the Mayor of Warsaw**. The direct impact of sponsors from NSF, the IEEE Computer Society, and

IBM Research has enabled partial financial support of 40 students to present their papers at the conference.

Finally, our thanks to the Centre for Quantum Computation & Intelligent Systems, and the Advanced Analytics Institute at UTS for hosting this conference, as well as to the IEEE Computer Society for their sponsorship. We appreciate the contributions of all the student volunteers who have offered their time to help make the conference a successful and memorable event.

Information for Session Chairs and Presenters

Facilities at the Presentation Room

All rooms are equipped with a desktop and digital projector connected to the desktop.

Presentation Time

The presentation time allocated to each regular paper is 20 minutes, and 10 minutes for each short paper, including questions and answers.

Session Chairs

If you cannot fulfill your duties as a session chair, please ensure that someone else will take your place as the session chair, or contact the Program Chairs to arrange a back-up.

Session chairs are kindly requested to help with the followings:

1. Note the time allocated for each paper in your session. Each regular paper is allocated 20 minutes (18 minutes for the presentation plus 2 minutes for discussion). Each short paper is allocated 10 minutes (8 minutes for the presentation plus 2 minutes for discussion).
2. Arrive at the room of the session 5 minutes before the session starts and identify each of the speakers for the session.
3. Suggest each speaker to keep corresponding time for discussions (questions and answers), and for transition to the next presentation. If a presentation extends into the time for discussions, please shorten the discussions accordingly or postpone the discussions until after the session.
4. Do not allow presentations or the subsequent discussions to spill beyond the starting time of the next presentation.
5. If the presenter of a paper is absent ("no-show"), please continue to the next presentation. Please check again at the end of the last presentation whether the "no-show" shows up. Best efforts have been made to reduce the number of no-shows; however, they may not be eliminated.
6. Each presentation room is equipped with a digital projector. If something is not working properly, please contact a volunteer for help.

Please check your presentation time and room. Please go to the room 5 minutes before the session starts and identify yourself to the session chairs.

1. Note the time allocated for each regular paper is 20 minutes (18 minutes for your presentation plus 2 minutes for discussion) and 10 minutes for each short paper (2 minutes for discussions).
2. When it is your turn to present, please leave corresponding time for discussion (questions and answers), and for transition to the next presentation. If your presentation extends into the time for discussions, discussions on your paper will be shortened by the session chair accordingly or postpone until after the session.
3. Please do not exceed your allocated time. Please follow the instructions of the Session Chairs.

If you cannot find your name in sessions or your information is incorrect in the Program Booklet, please contact the Program Chairs.

ICDM'10 Keynote Speeches

Title: *Mining Billion-node Graphs: Patterns, Generators and Tools*

PROFESSOR Christos Faloutsos

Department of Computer Science, Carnegie Mellon University, USA

Abstract

What do graphs look like? How do they evolve over time?
How to handle a graph with a billion nodes?

We present a comprehensive list of static and temporal laws, and some recent observations on real graphs (eg., "eigenSpokes"). We describe some recent generators, which naturally match all of the known properties of real graphs. Finally, we present the "oddBall" tool for discovering anomalies and patterns, as well as an overview of the PEGASUS system which is designed to handle Billion-node graphs, running on top of the "hadoop" system.

Biography

Christos Faloutsos is a Professor at Carnegie Mellon University. He has received the Presidential Young Investigator Award by the National Science Foundation (1989), the Research Contributions Award in ICDM 2006, fifteen "best paper" awards, and four teaching awards. He has served as a member of the executive committee of SIGKDD; and has published over 200 refereed articles, 11 book chapters and one monograph. He holds five patents and has given over 30 tutorials and 10 invited distinguished lectures. His research interests include data mining for graphs and streams, fractals, database performance, and indexing for multimedia and bio-informatics data.

Title: *Ten Years of Data Mining Research: Retrospect and Prospect*

PROFESSOR Xindong Wu

Title: *Assessing the Significance of Groups in High-Dimensional Data*

PROFESSOR Geoff McLachlan

Department of Mathematics, University of Queensland, Australia

Abstract

We consider the problem of assessing the significance of groups in high-dimensional data. In the case of supervised classification where there is data of known origin with respect to the groups under consideration, a guide to the degree of separation among the groups can be given in terms of the estimated error rate of a classifier formed to allocate a new observation to one of the groups. Even in this case with labelled training data, care has to be taken with the estimation of the error rate at least for high-dimensional data to avoid an overly optimistic assessment due to selection biases. In the case of unlabelled data, the problem of assessing whether groups identified from some data mining or cluster analytic procedure are genuine can be quite challenging, in particular for a large number of variables. We shall focus on the use of a resampling approach to this problem applied in conjunction with factor analytic models for the generation of the bootstrap samples under the null hypothesis for the number of groups. The proposed methods are to be demonstrated in their application to some high-dimensional data sets from the bioinformatics literature.

Biography

Geoff McLachlan is Professor of Statistics in the Department of Mathematics and a Professorial Research Fellow in the Institute for Molecular Bioscience at the University of Queensland. He is also a chief investigator in the ARC Centre of Excellence in Bioinformatics. He currently holds an ARC Professorial Fellowship and is currently a member of the ARC College of Experts. He has written numerous research articles and six monographs, the last five in the Wiley series in Probability and Statistics. His current research interests are focussed in the fields of machine learning and bioinformatics.
