Program 5e
COP-2250 - Java Programming
Professor: Michael Robinson
e-mail: mrobi002@cs.fiu.edu
Web Page: www.cs.fiu.edu/~mrobi002/teaching

- Turn in the signed source code on paper, and email me the source code.
- Make sure the program is properly documented and aligned uniformly, looking professionally, I will take points off if it is not.
- Include the following header in every program:

/***************************************************************************/
Author : Your Name
Course : COP 2250 M-W
Professor : Michael Robinson
Program # : Program Purpose/Description
{A brief description of the program }
Due Date : MM/DD/YYYY

Certification:
I hereby certify that this work is my own and none of it is the work of any other person.
.........{ your signature }.........
***************************************************************************/

Purpose of this program:
- Implement classes and constructors

**** NOTE ****
- Each task must be done inside its own function/method.
- Use main ONLY to create variables and call the functions/methods.

1 - Worth 10 points (classes and constructors)
Create a class with a constructor and name it: first letter of your last name +
first letter of your first name +
the word Names. ex: rmNames

dd class should have:
- private variables
- one constructor that will accept your first name, and your last name.
- mutator (set) methods that will be used to
  - receive other variables and set your private variables as requested by the main program.
- accessor (get) methods that will be used to
  - return values requested by the main program.

Create a main program called: your last name + first name initial + pgm5.
At the main(String arg[]) method in main program:
- call the constructor that will accept your first and last name
- call methods in the "class with constructor" program, that will set values to its
  private variables containing:
  - your major
  - amount of credits taken this semester
  - total amount of credits obtained so far
  - what grade do you expect in this class

At main, calling accessor (get) methods in the "class with constructor" print:
- Your first name, last name, major, amount of credits taken this semester,
  total amount of credits obtained so far, what grade do you expect in this class

Note: you need to turn in two programs, your class and the program that uses such class.
